The Commonwealth of Massachusetts.

TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council.

The trustees of the Worcester Insane Hospital respectfully submit their seventy-sixth annual report.

The report of the superintendent and treasurer are annexed hereto, containing in detail statements of the financial condition of the hospital, of the commitment, discharge and transfer of patients, of the health of the institution, of the work in the training school for nurses and of changes in the staff of the institution.

The work upon the alterations, additions and improvements contemplated in the appropriations granted last year has been prosecuted as fast as possible and will be completed the coming year.

No new work will be undertaken this year.

The trustees again urge the expediency of buying the Putnam and Curtis lands, to which attention has been called in their last two reports. The Commonwealth has too large an investment in this centrally located and well-equipped hospital to hazard any impairment of its value through the encroachment of undesirable surroundings. When this institution was established on its present location, in 1870, it was planned to accommodate 400 patients, and about 375 acres of land were purchased for \$110,000, or an average of nearly \$300 per acre. The Commonwealth desired at that time to secure both these tracts of land, but the owners would not then sell. It is possible now, however, to secure the Putnam land, containing about 40 acres, for \$5,000, and the Curtis land, containing about 68 acres, for \$13,600, — an average for both of a little more than \$175 an acre.

The hospital now accommodates over 1,200 patients, and the need of more land to care properly for this great increase over the original estimate seems obvious. The institution needs more land on which to give outdoor employment to its patients. It can, with their labor, put this land to a very considerable profit to the hospital, and much more than pay a handsome interest on the investment. If this land be acquired it can extend its farming and gardening operations, keep more of the patients suitably employed in a moderate amount of outdoor labor and raise an increasing amount of its own supplies.

The Putnam tract is only a few hundred feet distant from the new ward now under construction for excited women, and lies between that ward and the city of Worcester. The city is already making extensive improvements in the direction of the hospital, and if anything is to be done to keep this ward in proper seclusion and surrounded with the necessary recreation grounds, by the purchase of property to give the necessary protection, it must be done now.

The Curtis land adjoins land of the hospital now appropriated to gardening and farming. Its purchase would give an opportunity to extend this work. Before long a new and modern farm barn will be needed, and it will doubtless be thought expedient to locate it away from its present location. It is close to the main highway between Worcester and Boston, soon to be improved by the city, and quite near a growing residential section. The Curtis land affords the only location for more extensive, efficient and economic farming.

In this connection we desire to record our approval of measures tending to lessen the hours of labor of nurses and attendants, although there has resulted something of an increase in the expense of maintenance. We believe much remains to be done in this direction, and that, to secure steady and capable employees, we must ultimately provide proper accommodations on our grounds for the men and their families. When this is undertaken the need of additional land will be imperative.

For the purchase and survey of these two tracts we ask an appropriation of \$18,000.

We renew the suggestion, made a few years ago, that a more adequate provision be made for the disposal of the hospital's

sewage. At that time the State Board of Health recommended the construction of filter beds. An appropriation for that purpose was opposed by residents in Lakeview and was defeated. An appropriation for a connection with the Worcester sewerage system was opposed by interests in the Blackstone valley and defeated. Meanwhile, the condition of things to which attention was called four or five years ago has not improved. In view of these differences of opinion the trustees of the hospital do not advocate any particular method of sewerage disposal, but do recommend that some plan be devised to dispose of the sewage in a manner satisfactory to all parties.

We take this means of expressing to the superintendent, members of the staff and all employees our appreciation of their earnest and devoted services to the institution.

Respectfully submitted,

T. HOVEY GAGE, JR.
THOMAS RUSSELL.
SARAH E. WHITIN.
FRANCES M. LINCOLN.
SAMUEL B. WOODWARD.
GEORGE F. BLAKE.
LYMAN A. ELY.

Nov. 30, 1908.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Insane Hospital.

I herewith respectfully submit the following report of the hospital for the year ending Nov. 30, 1908, it being the seventy-sixth annual report.

There remained at the hospital Oct. 1, 1907, 1,159 patients, - 584 men and 575 women. During the year ending Sept. 30, 1908, there were admitted 655 patients, - 354 men and 301 women. Five hundred and ninety-eight patients - 332 men and 266 women — were dismissed from the hospital. Of this number, 239 patients - 137 men and 102 women - were discharged; 120 patients - 77 men and 43 women - died; 158 patients - 75 men and 83 women - were transferred; and 83 patients — 43 men and 40 women — left on visit or escape, leaving at the end of the statistical year 1,216 patients, - 606 men and 610 women. Of this number, 943 were supported by the State, 2 women (habitual drunkards) by towns, 168 by friends and 103 as reimbursing patients. Of the 397 patients discharged and transferred, 95 (including 11 habitual drunkards, women) were reported recovered, 60 capable of selfsupport, 46 improved and 192 not improved. Two were discharged not insane. Fifty men were transferred by the State Board of Insanity to the State Colony for the Insane, Gardner, 1 man and 37 women to the State Hospital, Tewksbury, 35 women to the Worcester Insane Asylum, 20 men to the State Hospital, Foxborough, 1 woman to the Danvers Insane Hospital, 1 man to the Asylum for the Criminal Insane, Bridgewater, 1 man to the Medfield Insane Asylum, 1 man to the Massachusetts Hospital for Epileptics, Palmer, and 1 man to the Northampton State Hospital. Nineteen men and 16 women were removed from the State, and 9 women were boarded out.

There remained at the end of the year 57 patients more than

at the beginning. The smallest number under treatment on any one day was 1,117, and the largest, 1,268. The daily average number was 1,189.45.

The percentage of recoveries, calculated upon the number of discharges and deaths, was 15.8; calculated upon the number of admissions it was 14.5.

The death-rate was 6.6, calculated on the whole number of patients under treatment, and 10, calculated on the daily average number.

The general health of the hospital has been good, both as regards the patients and the employees.

Under the very efficient guidance of Miss Ida A. McNeil, superintendent of nurses, our training school has been highly prosperous. Sixteen nurses were graduated. Of these, 7 are taking post-graduate work in general hospitals and 9 remain in the hospital service, 4 as supervisors and 5 as head attendants. There will be about 60 pupil nurses enrolled in the new junior class, which begins its studies Jan. 4, 1909.

We have had an abundance of applicants this year as nurses and attendants, and for this reason have been able to secure a better class of help, and now have a considerable waiting list. The hours of work of the nurses have been shortened and their wages increased during the year at an expense to the hospital of something over \$7,000, but we hope and believe that this additional expense will be more than offset by the improvement in the character and efficiency of the service rendered.

During the winter, as in previous years, the management was glad to offer the facilities of the institution and the assistance of its medical staff to Dr. Cowles, and to the members of his class from Clark University, for a series of ten clinics, held at the hospital.

Among the improvements, alterations and additions to the hospital, authorized by the Legislature, the iron staircase and elevator in the administration building is completed. The alterations in our old coal pocket for the purpose of a bath and work rooms are progressing, although slowly, as the work here is being done entirely by our own help, with the assistance of patients, and as there is much incidental work connected therewith in the way of excavations and the building of retaining

walls for our new coal pocket, getting out stone for the same, and incidentally clearing up waste land in the rear of the hospital, all of which has occupied our attention during the summer. The contract for the addition to the women's ward was let in the early fall, and the building is now well under way. We hope to have it completed and ready for occupancy by the first of June next.

Although our request for an appropriation for the purchase of the Curtis and Putnam lands, adjoining the hospital property, has been twice refused, it is, I think, due the hospital to again present the matter to the Legislature.

It is not a matter of sentiment, or a desire to add to the hospital belongings, that makes us urge this, but a belief that it is of vital interest to the present and future welfare of the institution that this land should be secured. We now have an opportunity, through the purchase of these two small tracts, to protect ourselves from encroachment for all time, - an opportunity which if allowed to go by will probably never again occur. The hospital is here to stay, and the city, in its natural growth, must eventually include it. Now it is quite as important for the city as for the hospital that the two be kept reasonably apart, so that neither may become an annoyance Should private dwellings come to occupy the to the other. land in question, it is easy to see where reasons for complaint would constantly arise on both sides. Such buildings upon the Putnam land would be especially objectionable on account of their close proximity to the main hospital building and the women's recreation grounds, and they would, if erected, oblige us to greatly restrict the liberty now enjoyed by this portion of our inmates.

If the excellent and comprehensive plan for providing for the insane of Massachusetts, outlined by the Board of Insanity in its special report to the Legislature of 1908, and adopted for the metropolitan district, is to be extended to the rest of the State, as it most certainly should be, and each institution be provided, as therein advised, with a detached building for the treatment of acute and curable cases, this land would be absolutely necessary, being the only available land near the hospital suitable for this purpose.

The Curtis land is needed for the better carrying on of the work of the hospital. Whatever one may think of a hospital farm in general, there can be no question but what that portion devoted to vegetable gardening is a source of no inconsiderable revenue, or that it furnishes very satisfactory and most necessary employment for a large number of patients. With the growth of our institution we find that our present land, even after encroaching upon our mowings, as we have been obliged to do, is insufficient for growing the vegetables needed for our table. A considerable part of the Curtis land lying convenient to the hospital is well adapted for gardening purposes, and would not only supply our present and future needs in the way of vegetables, but would give employment to a largely increased number of patients, whom we now find it difficult to employ in any remunerative way. It would also add to our mowings, and enable us to provide for our herd at less expense, as we are now obliged to buy much of our hay.

With the growth of the institution and the consequent increase in the number of our farm employees we have no longer sufficient room in our farmhouse, and are therefore obliged to find lodgings for them in private families. This is a considerable expense to the hospital, and it is becoming more difficult every year to secure suitable quarters for our farm hands in the immediate neighborhood at reasonable rates, so that as a matter of economy, if not of compulsion, we shall soon be compelled to build for them cottages of our own. The matter, also, of housing our help in general is one which has not been fully solved, but is one for which some provision will have to be made in the near future. It would undoubtedly tend to a greater stability in the character of our help, and to longer service, if we could employ married people, which we are now unable to do, except in a few instances, on account of the lack of proper quarters. This matter will therefore probably resolve itself into providing cottages for them, as well as for our farm hands. For neither of these purposes is there any suitable place on our present grounds.

Our farm barns are not adequate to our present wants. They are unsanitary and on account of faulty construction are difficult to keep in proper repair, and are a source of large yearly expense. We shall be obliged to replace them with a new building in the near future. Our neighbors, on the opposite side of Belmont Street, where a new residential section is rapidly growing up, would undoubtedly object to their being rebuilt where they are, and there is no other suitable and convenient place on the present hospital land.

The entire tract would be of immediate use to the institution, and would no doubt return to the State every year, in dollars and cents, sufficient to pay a fair interest on the money invested.

Dr. Cornelia B. J. Schorer resigned May 15, 1908, being obliged to give up her work on account of ill health. She had been connected with the hospital six years, and on account of her professional and executive ability, and her untiring fidelity to those placed under her charge, had come to be highly regarded by every one with whom she was brought in contact. We heartily regret the necessity which compelled her to sever her connection with the hospital. Dr. Florence H. Abbot was appointed in her place, June 15, 1908. Dr. George F. Sullivan resigned Dec. 21, 1907, to accept a general hospital appointment in New York city. Dr. Howard A. Knox resigned Sept. 28, 1908, to accept a position in the reserve corps, United States Army. Fred G. Campbell was appointed junior assistant July 1, 1908. Dr. Percy L. Dodge was appointed junior assistant Aug. 1, 1908. William D. Sproat, apothecary, resigned Sept. 30, 1908, to enter a medical school. He was a skilled druggist, a painstaking and competent teacher in our training school, and a most genial member of our household, and after a service of eight years left the hospital with the hearty well wishes of every one connected with it. His place has been filled by the appointment of George E. Pareseau.

We wish to thank the proprietors of the "Worcester Evening Gazette" and the "Fitchburg Sentinel" for copies of their papers, and the Worcester Employment Society for their valuable assistance in sewing.

H. M. QUINBY, M.D.,

Superintendent.

Respectfully submitted,

ALBERT WOOD,

Treasurer of Corporation.

Nov. 30, 1908.

Worcester, Mass., Dec. 22, 1908.

I hereby certify that I have this day compared the treasurer's statement of receipts and disbursements for the year ending Nov. 30, 1908, with the books kept at the Worcester Insane Hospital, and find it correct. I have also inspected the securities representing the invested funds of the institution and find that their value is as stated.

GEO. L. CLARK,
Auditor of Accounts.
